ADMINISTRATIVE INFORMATION

Work was performed under program element 62543N, project F43452, task area SF43452702 (NOSC 512-MB03) for Naval Sea Systems Command (NAVSEA 05H), by members of the NOSC Airborne Acoustics Branch. This document covers work from April 1978 through April 1980 and was approved for publication 1 August 1980.

Released by S Yamamoto, Head Marine Sciences Division Under Authority of HO Porter, Head Biosciences Department SECURITY CLASSIFICATION OF THIS PAGE (When Data Entered)

FOREWORD

This document has been prepared for the Naval Sea Systems Command (NAVSEA 05H) for general guidance in development of noise standards for US Naval ships. It is one of several dealing with various aspects of noise as related to habitability and the safety of personnel aboard Navy ships.

The assistance of the following people is gratefully acknowledged:

- LT F Bronk of DEPCOMOPTEVFORPAC, San Diego, CA, for scheduling.
- Officers and crews of the ships surveyed for their cooperation and guidance.
- DR Schmidt, RG Klumpp, JA Hoke, E Schiller, RP Kaufman, DC Cary, and L Mah for many hours of data collection.
- OD Elliott and ML Blackmore for data tabulation.

INTRODUCTION

This paper presents airborne noise data obtained in Navy shipboard compartments in support of an evaluation of airborne noise criteria on Navy ships. Additional reports which interpret these data are being prepared. They will present statistics on the relationship between present noise levels and existing noise limits; they correlate sound levels with subjective ratings of the effects of the noise obtained concurrently by questionnaire; and they recommend noise limits for future use.

PROCEDURE

A-weighted, C-weighted, and octave band sound pressure levels were measured on a not-to-interfere basis in compartments aboard 8 US Navy ships. These ships were the CV-61, CV-64, DD-972, DD-976, DDG-13, FF-1063, LST-1185, and LST-1191.

The measured compartments included the following types:

Pilot houses/bridges
Logrooms/chartrooms
Wardrooms
Command, control, and communication spaces
Offices
Workshops
Lounges/recreation areas
Staterooms (SR)
Large berthing compartments
Medical compartments
Libraries

Engineering spaces were not included.

RESULTS

Tables 1 through 8 report data for underway measurements for 8 ships; tables 9 through 13 report cold iron data for five of these ships.

The following kinds of data are reported for each compartment:

- (1) Compartment name and number.
- (2) Estimated room volume (calculated from measured or estimated room dimensions).
 - (3) Estimated room absorption. The number reported is 0 for a room with reflecting surfaces, and 1 for a room with absorbent surfaces. To calculate this number, each of the six room surfaces was rated as 0 (acoustically hard or reflective), 1, or 0 (soft or absorbent), and the sum of these six ratings was divided by 12.
 - (4) Sound pressure levels. A-weighted, C-weighted, and octave band sound pressure levels were measured using one or more of the following sound level meters: GR 1933, GR 1982, B&K 2204, B&K 2215, and, where so indicated, IVIE-10A. Calibration was acoustically checked before and after each day's measurements.
 - (5) Microphone locations. Measurements were often made at more than one location within a compartment. The approximate location is described in terms of a grid which divides a compartment into nine areas defined by starboard (stbd), center (cntr), port; and forward (fwd), center (cntr), aft.
 - (6) Comments. These provide additional information, such as specific equipment operating.
